

Module 1: Week 1 Assignment Solution

Q1. Which factor best contributes to overall mental wellbeing?

A. Ability to cope with life challenges

B. Constant happiness

C. Avoiding all stress

D. Ignoring emotions

Answer: A

Explanation: Mental wellbeing is not about feeling happy all the time. It involves being able to manage stress, adapt to difficulties, maintain healthy relationships and continue functioning effectively despite challenges.

Q2. Which of the following is the correct sequence of stages in the General Adaptation Syndrome?

A. Resistance → Alarm → Exhaustion

B. Alarm → Exhaustion → Resistance

C. Alarm → Resistance → Exhaustion

D. Exhaustion → Alarm → Resistance

Answer: C

Explanation: According to Hans Selye's General Adaptation Syndrome, the body first reacts to a stressor (Alarm), then tries to adapt and cope with it (Resistance). If the stress continues for too long without adequate recovery, physical and mental resources become depleted, leading to Exhaustion.

Q3. Which behaviour reflects healthy coping?

A. Suppressing feelings

B. Avoiding problems

C. Engaging in hobbies

D. Overthinking situations

Answer: C

Explanation: Healthy coping strategies help people manage stress in constructive ways. Activities such as hobbies, exercise or spending time with loved ones promote emotional wellbeing, unlike avoidance or suppressing emotions.

Q4. What is a key characteristic of digital overload?

A. Mental exhaustion from excessive information

B. Improved focus

C. Reduced device usage

D. Increased relaxation

Answer: A

Explanation: Digital overload occurs when constant exposure to emails, notifications, social media, and online information overwhelms the brain, leading to cognitive fatigue, difficulty concentrating, and increased stress.

Q5. Meher compares herself to influencers and feels inferior. Which theory explains this?

- A. Operant conditioning
- B. Cognitive dissonance
- C. Social comparison theory
- D. Behavioral theory

Answer: C

Explanation: Social Comparison Theory suggests that people evaluate themselves by comparing themselves to others. Comparing oneself with idealised images on social media can lower self-esteem and increase feelings of inadequacy.

Q6. Which of the following is an example of unhealthy social media behavior?

- A. Learning new skills
- B. Connecting with friends
- C. Watching informative content
- D. Comparing oneself constantly with others

Answer: D

Explanation: Constantly comparing oneself with others on social media can negatively affect self-esteem, increase anxiety and create unrealistic expectations about one's own life and achievements.

Q7. What is the main purpose of relaxation techniques?

- A. Increase stress levels
- B. Improve memory only
- C. Reduce physiological and mental tension
- D. Avoid responsibilities

Answer: C

Explanation Relaxation techniques are designed to activate the body's natural relaxation response, which helps counteract the effects of stress. Practices such as deep breathing, progressive muscle relaxation, meditation, and mindfulness slow the heart rate, reduce muscle tension, lower stress hormone levels, and promote a sense of calm. As a result, they help reduce both physiological tension and mental.

Q8. Which practice helps in improving self-awareness?

- A. Mindful observation of thoughts
- B. Ignoring emotions
- C. Multitasking
- D. Social withdrawal

Answer: A

Explanation: Mindfulness involves paying attention to one's thoughts, emotions, and bodily sensations without judgment. This increases self-awareness and helps people respond more effectively to stress and emotions.

Q9. According to Piaget's theory, what is the "imaginary audience"?

A group of friends who provide feedback on behavior

B. The belief that others are constantly watching, noticing, and evaluating oneself

C. The tendency to imitate people seen in the media

D. The ability to understand another person's perspective

Answer: B

Explanation: The imaginary audience is a feature of adolescent egocentrism described by Piaget. Adolescents often believe that others are constantly observing and judging them, which can make them feel especially self-conscious about their appearance and behavior.
